Single ionization of helium atom by 75 keV protons

Saturday 5 July 2025 15:50 (20 minutes)

The report is devoted to unique recent experiments on measuring the fully differential cross section of the reaction $p+\text{He} \rightarrow p+e+\text{He}^+$ at a proton energy of 75 keV and low energy transfer to the atom. The presented theoretical and numerical calculations show the important role of the pickup mechanism
